PIXEL WIZARD

techFEST'26 | Sant Longowal Institute of Engineering & Technology (SLIET)

Event Overview

Pixel Wizard is a 24-hour frontend web development competition. Teams must build a website by choosing one of the problem statements below. The focus is on original work, usability, responsive design, and clear implementation.

Team size: 2–3 participants

Permitted technologies: Any frontend technology, framework, UI library, or development tool.

Problem Statements

Problem Statement 1: Event and Festival Website

Build a responsive frontend website for organizing, promoting, or presenting any kind of event or festival. Examples include a college fest, conference, music festival, cultural event, sports tournament, art exhibition, or charity event. The website should present important information such as the event overview, schedule, venue, activities, and participation details in a clear and user-friendly way.

Problem Statement 2: Commercial Business Website

Build a professional frontend website for a commercial business, such as an online store, restaurant, clothing brand, electronics shop, travel agency, or fitness studio. The website should present the business and its products or services clearly, with intuitive navigation and a consistent design that supports a good customer experience.

Problem Statement 3: Hostel Management System

Build a frontend website that supports common hostel-related activities for students and administrators. It may present student information, room allocation, complaint tracking, mess menus, and hostel announcements. Mock data or browser storage may be used; a backend or database is not required.

Rules and Regulations

1. Teams must consist of 2–3 participants.
2. Each team must choose and work on only one problem statement.
3. Any frontend technology, programming language, framework, UI library, or development tool may be used to build the website.
4. Teams are responsible for ensuring that all chosen technologies work together and that the final website is usable and responsive.
5. The use of LLMs, AI coding assistants, agentic models, or AI-generated code/content is not permitted during the competition.
6. Previously completed projects, copied websites, and prebuilt templates are not permitted.
7. Development must take place during the official competition period.
8. The repository name must match the team's official name.
9. All submitted work must be original and comply with the competition rules.
10. Teams must submit their repository/demo link before the submission deadline.
11. The GitHub repository link must be public and accessible to the judges.
12. Violation of the rules may result in disqualification.
13. Teams must follow instructions shared by the organizers.
14. The judges' decision will be final.

Evaluation Criteria

- Functionality and interactivity: 30%
- UI/UX and visual design: 25%
- Creativity and originality: 20%
- Responsive design: 15%
- Code quality and rule compliance: 10%

Submission Checklist

- Ensure the website addresses the selected problem statement.
- Test navigation and interactive elements.
- Check the website on different screen sizes.
- Use the official team name as the repository name.
- Make sure the GitHub repository is public and accessible to the judges.
- Submit the repository/demo link before the deadline.
